Standardized milling motor spindle 2SP1

Compact and ‘all-inclusive’ in the spindle box

Increasing requirements for higher metal removal rates with higher speeds in combination with a more compact design have resulted in the increased use of motorized spindles. With the 2SP1 series, Siemens provides motorized spindles for milling machines with an extremely attractive price/performance ratio, proving once again its expertise as a system supplier of equipment for machine tools.

Compact with all necessary spindle functions

The new motorized spindle family is optimized in terms of its performance data so that it represents a real alternative to conventional belt-driven solutions. It also consumes much less space and can be installed quickly and easily thanks to its cartridge-type design. All the important components of a motorized spindle are available. These include:

- Different types of tool interfaces (SK40, CAT40, BT40 or HSK A63)
- Pneumatic or hydraulic tool clamping and releasing mechanisms
- Rugged spindle bearings in maintenance-free greased design to absorb the machining forces
- Water-cooled drive motors in synchronous or asynchronous design
- Enclosed spindle housing with mounting flange
- Sensors for indexing and monitoring tool change

High torque output and universal application

The standardized milling motor spindle 2SP1 as standard has a high output torque and can therefore be used both for roughing and finishing. The motorized spindles are characterized by their extremely rugged construction. Different levels of performance with various output values and speed characteristic values are available, based on two different diameter sizes, whereby different output levels are possible within the same milling machine family. There are different torque classes (40 Nm/ 80 Nm/ 100 Nm/ 170 Nm S1 mode) and several speed classes (10,000 rpm/ 15,000 rpm/ 18,000 rpm) to satisfy different torque and speed requirements.

Expertise in spindle manufacture – Reliable in use

Reliable operation of the standardized milling motor spindles 2SP1 is guaranteed by the experience in spindle manufacturing gained by the company Weiss Spindeltechnologie GmbH over many years and the expertise of Siemens in control and drive systems for machine tools. This mechatronic unit is a symbiosis of high-quality mechanical engineering and bearing technology combined with the latest motor technology and electronics. Motorized spindles are manufactured by Weiss.

Economical standard solution with a number of advantages

The standardized milling motor spindle 2SP1 is the ideal drive solution for main spindles in standard milling machines and machining centers and offers the customer significant advantages in comparison with conventional belt-driven solutions:

- The complete solution is comparable with belt-driven solutions and more economical than the classical customized motorized spindle designs
- Hydraulic or pneumatic tool clamping and releasing mechanisms depending on customer preference
- Thanks to the pneumatic tool clamping and releasing mechanisms, a hydraulic unit is not required
- Integrated sensors (for indexing and monitoring tool change)
- Higher max. speed and shorter acceleration time compared to conventional solutions
- Drive train with greater rigidity
- More compact solution
- Fewer parts and easier installation
- Extreme short tool change times with 2SP120 by a 2-channel system and an optional retaining collet
- Worldwide supply of complete systems including spindle mechanics from a single source from Siemens
### Standard functions

- **Tool interface**
  - HSK A63
- **Tool clamping device**
  - Released by pneumatic cylinder 6 bar
  - Clamping cup springs
- **Tool cleaning**
  - Compressed air through draw-bar 5 ... 6 bar
- **Working position**
  - Horizontal / vertical
- **Housing**
  - Cartridge with flange mounting
- **Bearing lubrication**
  - Grease, permanently lubricated
- **Front bearing seal**
  - Sealing air 1 ... 1.5 m³/h
  - Filter mesh 8 μm
- **Hollow-shaft encoder**
  - Incremental, sin/cos 1 Vpp 256 S/R with zero indication
- **Motor temperature sensor**
  - PT1000
  - PTC thermistor drilling for full motor protection
- **Sensor (analog) for clamping status**
  - Tool clamped
  - Draw-bar in release position
  - Clamped without tool
- **Sensor (digital)**
  - for position status release piston
- **Cooling**
  - Water, max. 5 bar, 10 l/min
  - Max. 25% anticorrosion fluid Clariant Antifrogen N or Tyfocor
  - Filter mesh 100 μm
- **Media connections**
  - 2 x flexible tube connector Ø 10/12 mm, coolant
  - 1 x G 1/8 radial and Ø 5 mm axial, coolant
  - 1 x G 1/4, taper cleaning air separate connection at the spindle back
  - 1 x G 1/4, pneumatic tool release
  - 1 x G 1/8, pneumatic tool clamping
- **Electrical connections**
  - Power via 1.5 m cable
  - Sensors via signal plugs

### High feature options

- **Internal tool cooling**
  - 50 bar, up to 54 l/min
  - Filter mesh 50 μm
  - acc. to -/16/13 ISO 4406
- **Tool clamping device**
  - Release by hydraulic cylinder 80 bar
  - Clamping by cup springs
- **Ring for external tool cooling**
- **Power connector**
  - size 1,5: 2SP1202
  - size 3: 2SP1204
- **Retaining collet (270 N holding force)**
- **Sensor for clamping status digital**
## Design of the standardized milling motor spindle 2SP125

### Standard functions

- **Tool interface**
  - SK 40 for tools with asymmetrical slot arrangements
- **Tool clamping device**
  - Released by pneumatic cylinder 6 bar
  - Clamping cup springs
- **Tool cleaning**
  - Compressed air through draw-bar 5 ... 6 bar
- **Working position**
  - Horizontal / vertical
- **Housing**
  - Cartridge with flange mounting
- **Bearing lubrication**
  - Grease, permanently lubricated
- **Front bearing seal**
  - Sealing air 1 ... 1,5 m³/h
  - Filter mesh 8 μm
- **Hollow-shaft encoder**
  - Incremental, sin/cos 1 Vpp 256 S/R with zero indication
- **Motor temperature sensor**
  - PT1000
- **Sensor for clamping status**
  - Tool clamped
  - Draw-bar in release position
  - Clamped without tool
- **Cooling**
  - water, max. 5 bar, 10 l/min
  - max. 25% anticorrosion fluid Clariant Antifrogen N or Tyfocor
  - Filter mesh 100 μm
- **Media connections**
  - 2 x G 1/2 (Ø 9 mm), cooling
  - 1 x G 1/8 (Ø 8 mm), air barrier
  - 1 x G 1/4, taper cleaning air
  - 1 x M16x1,5 pneumatic tool release
  - 1 x G 1/8, pneumatic tool clamping
- **Electrical connections**
  - Power via 1.5 m cable
  - Sensors via signal plugs

### High feature options

- **Internal tool cooling**
  - 50 bar, up to 54 l/min
  - Filter mesh 50 μm acc. to-/16/13 ISO 4406
  - 1 x G1/4, cooling lubrication, 1 x G1/8, leckage
- **Max. speed**
  - 15.000 rpm (with HSK A63)
- **Tool interface**
  - BT 40
  - CAT 40
  - HSK A63

---

The diagram illustrates the components of the spindle, including the housing with flange, sealed coolant jacket, pneumatic release unit, and rotary unit for internal tool cooling.
## Dimensions

</table>

1) Without rotary feedthrough unit, the spindle length is shorted by approx. 43 mm
2) Tool interface HSK A63
3) Tool interface SK40, CAT40, BT40
4) With hydraulic tool clamping device, the spindle length L1 is approx. 118 mm shorter, L3 is approx. 147 mm shorter and L4 is approx. 30 mm longer

### Options

- **Electronical connections**
  - 2: power via 1.5 m cable without connector, signal connectors for the sensors
  - 6: power via 1.5 m cable and connector size 1.5 (only 2SP1202) or connector size 3 (only 2SP1204), signal connectors for the sensors

- **Sensors**
  - Digital sensor: Position release piston (only 2SP120)
  - Digital sensor: position release piston (only 2SP120)
  - M: L + Bearing temperature sensor PT100 (only 2SP120)
  - N: K + Bearing temperature sensor PT100 (only 2SP120)

- **Tool interfaces**
  - A: SK 40 tool interface
  - B: BT 40 45° tool interface
  - C: CAT 40 tool interface
  - D: HSK A 63 tool interface
  - E: BT 40 30° tool interface
  - R: HSK A63 tool interface with retaining collet (only 2SP120)

- **Cooling**
  - 1: closed cooling jacket
  - 3: closed cooling jacket and coolant through tool (50 bar)
  - 4: closed cooling jacket and ring for external tool cooling (only 2SP120)
  - 5: closed cooling jacket, coolant though too (50 bar) and ring for external tool cooling (only 2SP120)

- **Tool clamping- and -releasing device**
  - 0: pneumatic (only 2SP125)
  - 2: pneumatic (only 2SP120)
  - 3: hydraulic (only 2SP120)
